EXCEL DASHBOARDS & ANALYTICS

EXCELT

EXCEL DASHBOARDS & ANALYTICS TRAINING

Excel.TV is proud to offer **Excel Dashboards & Analytics Training**. We offer a two-day deep dive course taking students through hands-on examples in building dashboards, interactive decision support, data visualization theory and applications, advanced charting, and predictive analytics. We also offer a one-day, “greatest hits,” version delivered onsite or online for teams looking for an introduction to analytics and dashboards with Microsoft Excel.

Excel.TV also offers the online course, **Excel Dashboard Pro**, perfect for teams who want to carryforward what they’ve learned onsite or online. Excel Dashboard Pro includes over six hours of video instruction, labs, and support on using Excel for data, analytics, visualization, and dashboards.

AUDIENCE

Our training is perfect for experienced business teams familiar with Excel. People whose roles are business analyst, data analyst, financial analyst, analytics manager, program or project manager and similar will feel very comfortable with the course content, pace, and challenge.

This is not an introductory course nor should it be considered on a scale from beginner to advanced. This course is designed for business teams to gain immediate and practical skills.

INSTRUCTOR

This course is taught by Jordan Goldmeier, Microsoft Excel MVP. Jordan is an internationally recognized data scientist and visualization expert, author, and speaker. He wrote *Dashboards for Excel* and *Advanced Excel Essentials*, and provides technical editing to articles on Excel development and data science. He has consulted with and provided training for NATO Training Command, the Pentagon, and Financial Times and the University of Cincinnati’s Center for Business Analytics.
